

Rotacaster multi-directional conveyor solutions

Rotacasters offer a superb solution for multi-directional conveyor and load transfer needs.

Built to provide the robustness and ride quality of an industrial floor wheel, the Rotacaster's patented full polymer construction and 360° manoeuvrability has brought a new level of performance to conveyor transfer and inverted multi-directional motion applications.

Simple mounting options and a range of hubs make them easy to adapt to existing systems, both passive and driven. Rotacaster's injection moulded cup mounts provide the perfect alternative to a ball transfer unit.

Different wheel diameters and durometers provide the choices needed to handle light, sensitive, unstructured or heavy duty industrial level loads.

Key Rotacaster conveyor benefits:

- compact size allows more wheels per m² and minimal spacing between adjacent rollers for:
- Greater load distribution
- Reduced soft surface indentation
- Ability to handle a greater range of surface profiles

Injection moulded mounting cups and roller axles:

- Improved impact resistance
- Higher load capacity
- Reduced risk of downtime due to lost rollers

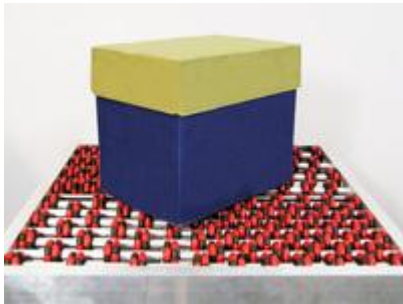

Fully moulded polymer wheel (no steel pins or inserts) ideal:

- Corrosive environments
- X-ray applications
- Magnetic environments
- Low maintenance applications

Heavier duty transfer tables:

- Choose the 125mm Rotacaster to for heavier duty load transfer needs.
- Ideal for pallet transfer tables
- Same robust fully moulded all polymer construction.
- Reliable continuous performance
- Minimal maintenance

Exceptional flexibility:

- Simple, fast mounting alternatives
- Quick deployment with 80/20 system
- Broad range of hubs both metric and imperial
- Lighter and stronger than similar wheels
- Quieter & smoother ride

Choice of roller durometers for:

- protection of surfaces
- greater traction for driven applications
- different climatic environments

Cylindrical stock or pipe handling:

Rotacasters provide a unique solution to managing the handling of cylindrical stock and pipes by enabling simultaneous rotational and longitudinal movement.

- Non-marking rollers assure blemish free surfaces
- Available to support small to very large diameters
- Set-up can be both mobile or installed
- Low maintenance, robust, all-polymer construction

From wheels of different sizes and durometers to complete transfer table or cradle solutions, Rotacaster offers highly functional, robust and reliable solutions.
